

**More than an assurance message.
BOBCAT together with CATS Modal®
tells you where you are in the Modal Data Acquisition.**

Modal Analysis simplified - and automated

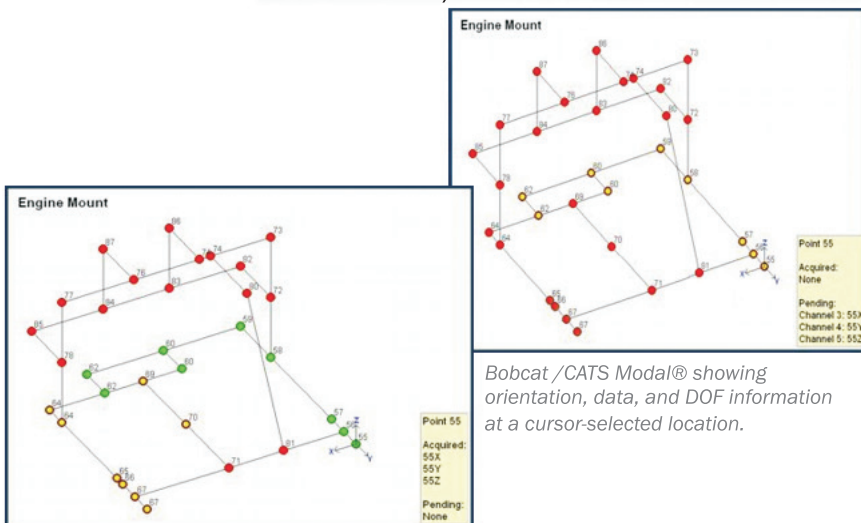

You enter the geometry and indicate the DOF's where you want to take data.
As you are acquiring data with BOBCAT you get a Real-Time picture showing:

- ▶ The transducer orientation at any cursor-selected location
- ▶ The status for data at each location:
 - Acquired
 - Pending
 - Not active
- ▶ Full DOF information at any cursor-selected location
- ▶ Automatically assigned DOF tag with each stored FRF

*We took no shortcuts
designing BOBCAT, so you
can take all the shortcuts
you need to get your
job done quickly
and easily.*

BOBCAT/CATS Modal® - Your real-time modal roadmap

Spectral Dynamics . . . We do things right!
